

Imperial Point Medical Center

Widely recognized as the leading out-patient surgical hospital in South Florida, Imperial Point Medical Center has become the flagship for minimally invasive endocrine surgical care in Ft. Lauderdale. Recognizing a community need, the North Broward Hospital District, Imperial Point's parent organization, has invested in *rapid intra-operative parathyroid hormone testing* and *radio-guided surgery*. This advanced technology increases the likelihood that *minimally invasive parathyroid surgery* will be curative and that hospital stays will be minimized. Imperial Point has also invested in the expensive tools necessary to perform minimally invasive thyroid surgery and laparoscopic adrenal resection. A consistent winner of South Florida out-patient service awards, Imperial Point is a high technology surgical facility with a long history of personalized care.
